THE 2020 WORLD COOPERATIVE MONITOR

EXPLORING THE COOPERATIVE ECONOMY

Bruno Roelants
Director General, ICA

Gianluca Salvatori
Secretary General, Euricse

The International Cooperative Alliance (ICA) and the European Research Institute on Cooperative and Social Enterprises (Euricse) are pleased to present the ninth annual World Cooperative Monitor report. This publication reports on the world's largest cooperatives and mutuals, or groups of cooperatives and mutuals, including rankings of the Top 300 and sectoral analysis based on 2018 financial data.

Each year, the World Cooperative Monitor builds upon the research and data collection of the previous years, continually refining and improving the methodology and data collection strategies. There are many challenges in comparing organisations across countries with different legal frameworks and standards but, working with partners and federations from across the globe, we are able to construct a scientifically robust and informative report.

For the cooperative movement, and not only, this past year has presented serious challenges and also seen meaningful positive contributions to health and well-being around the world. The global pandemic has put a strain on many businesses, but

as you'll read about some in this report, many large cooperatives have stepped in to help employees, members, and communities to face the health and economic repercussions of COVID 19.

In addition to the rankings and special section on the global pandemic, this year's report also includes a special focus on the UN Sustainable Development Goals (SDGs), goal 13 – Climate Action in particular. As in previous editions of the WCM, we have analyzed the contribution of the Top 300 and other large cooperatives to meeting the targets of this SDG, demonstrating how cooperatives can lead the way to a more sustainable economy.

The newly formed International Cooperative Entrepreneurship Think Tank (ICETT), a group of large cooperatives engaged with the ICA on strategic thinking around cooperative entrepreneurship, has contributed to the reports on COVID 19 and SDG 13 and we thank the members for their support and commitment to this annual publication. A special thank you as well to all the contributors and collaborators, the organizations that provided their data, and the supporters of this year's World Cooperative Monitor.

INTRODUCTION

The World Cooperative Monitor, which achieves its 9th edition in 2020, has continuously developed in pursuing its two ambitions: illustration of the economic and social contributions of cooperatives and mutuals through the data on large cooperatives and mutuals and development of a methodology for data collection. Although there are still unsolved issues, the WCM 2020 describes the global landscape of large cooperatives and mutuals and illustrates their dynamics, with empirical evidences.

HOW ARE COOPERATIVES AND MUTUALS RESPONDING TO THE CURRENT GLOBAL CHALLENGES?

It is sure that the year of 2020 will be marked as the year of unprecedented global crisis: COVID19. At the same time, the temporary improvements to the quality of the environment during this crisis showed that our actions for the climate could change the negative scenario related to climate change. In this sense, it was very timely and relevant that “cooperatives for climate action” was adopted as the theme of the International Day of Cooperatives 2020.

In focusing on large cooperatives and mutuals, which can make a more visible and measurable impact, the WCM 2020 tries to capture the dynamics of how they are

effectively responding to these two global challenges. In using information from the collected data as well as in collaborating closely with the International Cooperative Entrepreneurship Think Tank (ICETT), the WCM 2020 dedicates two sections on these topics.

The COVID 19 chapter discusses some of the effects the global pandemic has had on the cooperative sector along with some of the ways in which cooperatives and policymakers have responded. Despite the huge impact the health crisis has had, cooperatives have proven resilient and innovative. The chapter highlights some concrete actions large cooperatives have taken and includes a case story about SMART and their actions towards helping their members, primarily from the culture and creative arts sector.

The section focused on large cooperatives and SDG 13 – Climate Action brings our attention to the contribution of large cooperatives to mitigating and adapting to climate change, and in general creating a greener society. Concrete examples of actions taken by large cooperatives, including an interview with Midcounties Co-operative and a case story on Rabobank, demonstrate how the contributions of cooperatives can be fundamental on several fronts, not just within their cooperative but also in promoting and encouraging

change in the actions of partners, members, clients, and local communities.

GLOBAL LANDSCAPE OF LARGE COOPERATIVES AND MUTUALS

In establishing the Top 300 rankings, the WCM 2020 also showcases the economic weight and main characteristics of the largest cooperative and mutual enterprises across the world¹. The WCM presents two different Top 300 rankings: one based on turnover and the other based on the ratio of turnover over Gross Domestic Product (GDP) per capita². Employment data is also presented for the Top 300 where available.

The Top 300 by turnover ranking this year (data reference year 2018) presents an overall total of 2,146 billion USD with the agricultural (104 enterprises) and insurance sectors (101 enterprises) dominating the list. The wholesale and retail trade sector mainly composed of retailers' cooperatives (33 enterprises) and

consumer cooperatives (21 enterprises) represents the third biggest economic sector followed by the financial service sector (21 enterprises). In terms of cooperative type, almost half of the Top 300 are producer cooperatives (133 enterprises) mainly representing agricultural cooperatives and retailers' cooperatives, whereas mutuals (83 enterprises) and consumer/user cooperatives (65 enterprises) mainly composed of consumer cooperatives and financial service cooperatives represent the other half. Only a small number of worker cooperatives (3 enterprises) and multi-stakeholder cooperatives (2 enterprises) are included in the Top 300 rankings by turnover. As the turnover is taken with its absolute value, most of the large cooperatives and mutuals in the Top 300 rankings are from the most industrialized countries such as, the USA (74 enterprises), France (44 enterprises), Germany (30 enterprises), Japan (24 enterprises), Netherlands (18 enterprises) and Italy (12 enterprises).

¹ It should be noted that due to limited data sources, the Top 300 rankings cannot be considered exhaustive. However, it should also be noted that based on the consolidated data collection methods refined over the last nine years, the rankings in the WCM 2020 represent a very important part of largest cooperatives worldwide (for more detailed information on data collection, please see the section on methodological remarks in this chapter and the Methodology and Data sources section).

² The ratio of turnover over GDP per capita measures the turnover of the Top 300 cooperative and mutual enterprises in terms of the purchasing power of an economy, relating the turnover of the enterprise to the wealth of the country. It allows us to compare the relative size of enterprises in considering different levels of national economic wealth.

However, the Top 300 based on the ratio of turnover over GDP per capita shows a different landscape. When we correct the bias in calculating the effect of different levels of national economic context, the predominance of agriculture and insurance sectors is slightly mitigated and service sectors become more visible (education, health and welfare sector with 7 enterprises compared to 2 enterprises in the Top 300 by turnover and other services with 6 enterprises compared to 2 enterprise in the Top 300 by turnover). This

change also implies that worker cooperatives become more visible in the Top 300 GDP per capita (10 enterprises). Particularly, the Top 300 turnover over GDP per capita allows more countries to enter in the ranking, such as Colombia, Costa Rica, Uruguay, Turkey and Kenya, which is the only African case in the WCM 2020. It also sheds more light on some countries with a significant number of large cooperatives which were less visible in the Top 300 by turnover, such as Spain, Colombia, Brazil, Argentina and India.

THE WCM AND THE INTERNATIONAL COOPERATIVE ENTREPRENEURSHIP THINK TANK (ICETT)

Another interesting aspect that is new for the WCM 2020 is the establishment of a close relationship with the ICETT, a recently-formed group of large cooperatives engaged with ICA in the study and deepening of various issues related to the cooperative world. A collaboration has begun to integrate cooperative issues of the moment with the WCM to stimulate strategic action through best practice sharing amongst ICETT members, the top 300 cooperatives and mutuals and the wider cooperative movement.

This partnership is leading to mutual growth; in fact, we are happy that the WCM is seen by the group as a useful tool, both to the cooperative world to evaluate its own positioning, and to the outside world to highlight the importance of cooperation in the world. At the same time, the possibility of working with ICETT members allows us to improve, as much as possible, the WCM and to collect useful ideas that can be incorporated in the report in the future.

INTERVIEW WITH TARUN BHARGAVA GENERAL MANAGER (COOPERATIVE RELATIONS) OF IFFCO (INDIA)

Tarun Bhargava is the Chair of the Cooperative Entrepreneurship Think Tank (ICETT), the ICA think tank formed in 2018 to strengthen cooperatives' entrepreneurial performance by seeking and using innovative ideas, research, education, and cooperation to address the challenges that cooperative enterprises are facing.

What value can the ICETT bring to the International Cooperative Movement?

This is indeed a very important question, simply because you refer to the movement and not just the ICA. ICETT is the brainchild of the circumstances the global community finds itself in. There are enterprise ideas that are unable to take off; the ones that do take off hardly manage to survive; there is little or no entrepreneurial exchange among large cooperatives. ICETT is expected to bridge these gaps and usher in an era of strategic thought which could propel strategic action among cooperatives, aimed at strengthening interna-

tional cooperation and through it, large scale benefits to the wider community. It works through four working groups on important themes like 'Future of Work', 'Human Rights and Value Chains', 'WCM & SDGs' and 'Cooperative Identity and Competitive Advantage', and its membership is comprised of true leaders from the cooperative sector, who have now committed and resolved to help the movement on entrepreneurial aspects and climate, in the 21st century. Besides this evident value of bringing together large ethically run global leaders, in my opinion, ICETT is best positioned to mobilize cooperative values of solidarity and social responsibility in the context of cooperative entrepreneurship.

How are the members of ICETT collaborating on the World Cooperative Monitor research and what are the prospects for future collaboration?

ICETT collaboration on the WCM is going to be a game-changer. All of us are proud of the unparalleled and unique work that the WCM team has done so far. I think it is timely that large cooperatives like IFFCO, The Midcounties Co-operative, Sancor Seguros, Mondragon, Rabobank, S Group, and other members of the ICETT, can reflect together with the WCM team on issues beyond their economic contribution to the society. We live in a world of SDGs, and many corporations around the world co-own the pursuit of these goals along with governments and the civil society movement. The link between WCM and ICETT will help us all articulate and pronounce the role and nature of cooperatives, which have sustainability in their DNA, in the run up to 2030. WCM has since 2018 included a section on SDGs in its reports. The close collaboration envisioned between ICETT and WCM will take this coverage forward, and bring much value to future WCM reports as the two now have a discussion and thinking platform to convene and brainstorm ideas and topical issues which could be included in WCM reports to help better recognize and appreciate the difference Coop Business Model can bring to the society. I believe that in the future WCM will be a very crucial tool to raise the profile of cooperatives for policy makers and industry professionals working in the Coop Arena.

How have international partnerships such as ICETT impacted the work of IFFCO?

IFFCO is a product of International Cooperation, and more than anything else, India is a land of freedom of knowledge where our ethos is built on gaining education and practicing learning. Our participation in the ICETT is fully inspired by Hon'ble Managing Director, IFFCO Dr U.S. Awasthi, who is an internationalist and has been on the forefront of innovative evolution of our cooperative organization that represents the needs and aspirations of 36000 member cooperatives! Besides India, IFFCO has its operations in Jordan, Oman, Dubai and works with many other global corporations. Like other members of the ICETT, we stand to gain from respective best practices in general, SDGs linked initiatives, and strategic inter-cooperation including trade and business, in particular. IFFCO has also been on the board of the ICA for years, representing the voice of the largest cooperative movement in the world, and by this I don't mean only my country, India, but also in our region and sector.

In this edition of the World Cooperative Monitor we're specifically addressing the targets of SDG 13 (Climate Action). How are cooperatives positioned to meet the targets?

I take the example of IFFCO where Climate change is central, both in terms of us taking full cognisance of the threat for, primarily, our members are farmers, and secondly, in terms of our commitment to lessen the effect by taking appropriate action. At IFFCO it is our way of life to integrate Environment Friendly Ergonomic solutions within our business processes. We have entered the ecological fertilizer sector in a big way and expect to bring in behavioural change in millions of farmers and citizens at large to opt only for environmentally friendly practices on their farms as well as kitchen gardens. We will be able to tackle climate change through science and innovation, apart from of course doing small things individually. The latest innovation to come out is IFFCO Nano-Urea and other nanotechnology based agri-inputs. We have also forayed into Bio-Fertilisers, Sustainable Agro-Forestry, Sustainable Water & Waste Management, Sagarika-A Seaweed based bio-stimulant and Solar Energy based implementation in our production units in a big way. We believe the Soil is the Soul of Mother Earth and we help Farmers to conserve it for the future. We have examples from Mon-dragon, Rabobank and coops from other sectors also who are committed to contributing to this important subject.

This year we can't ignore the impact of COVID 19 on our economies and our work as cooperatives. What role can cooperatives play in the recovery efforts?

Most importantly, we cannot forget the impact of COVID-19 on our homes and by that I mean by the health of our near and dear ones. This is what Dr U.S. Awasthi mentioned during one of the first webinars organized under the ICA system way back in June this year. Our recovery has to be oriented to benefit humanity first, but also needs to be centered around safe-guarding our planet. The pandemic is also a reminder of nature hitting back and claiming its space back from unethical practices, particularly in the business world. To begin with, we need to support people-centric social enterprises in healthcare. I think cooperatives are the most suitable vehicles to reach to different strata of the society in these challenging times. I believe IFFCO as well as other members of the ICETT and of course large cooperatives the world over must come together in solidarity, plan and launch a recovery strategy immediately and should include the virtual tools to address the new normal.

WCM DATA COLLECTION

In the “Methodology and data sources” section, readers will find detailed information on the methodology and data sources used for the 2020 WCM. However, it would be worth noting here some changes and key aspects of the data collection method.

First, with the aim of collecting economic and employment data from the largest cooperative and mutual enterprises, this year we have concentrated efforts on collecting turnover and employment data through the search for annual and sustainability reports for each organization in the Top 300 ranking of the WCM 2019 rather than relying primarily on external datasets. This strategy has allowed us to centralize data collection while at the same time providing a better understanding of the organizations, both in their structure (in most cases particularly complex) and with respect to the activities carried out. The online research has been integrated with other data sources: the lists that are published at national level, existing datasets and the answers to the online questionnaire.

With regard to the national lists, these constitute an important source for the WCM and for this reason we hope that they will be produced by more countries and sectors.

The national lists have the advantage of listing the cooperative organizations in their own country, taking into account the cooperative system that characterizes it. It should be noted that we have closely collaborated with the national cooperative movement organizations not only through the national lists but also to get information on large cooperatives found in different data sources¹.

Data relating to some organizations can be difficult to find if not included in national or sector lists. It is particularly the case for most developing countries where the existing enterprise datasets do not provide significant coverage. In fact, in this edition some organizations that usually enter the top 300 ranking are not present because some lists have not been published.

As for the questionnaire, we consider this a very useful tool and for this reason we continue to use it as a source of data collection and every year we try to make it complete but at the same time as short as possible. Nevertheless, it is not yet a successful tool and the response rate is much lower than our expectations. We hope that in the future, organizations will understand the importance of data sharing and that we will receive a greater number of completed questionnaires.

The complete results and summarized methodology are in the “2018 Results and Rankings” chapter.

¹ The complete list of data sources is in the methodology chapter.

IMPACT AND REACTIONS OF COOPERATIVES TO COVID-19

The Covid-19 pandemic has had a global socioeconomic impact on all human affairs, both at the individual and aggregate level. In most countries, the true cost of this crisis has yet to be assessed, as it will be possible to do so only after the containment measures are lifted and relief plans interrupted. However, it is to be expected that all kinds of companies, from micro enterprises to massive multinational groups, have been affected (OECD, 2020a; Bartik et al. 2020, Ding et al. 2020). In this framework, it is perfectly plausible that the cooperative world has been impacted as well. Although it has been noted that the cooperative business model has been resilient to the previous global financial crisis (Birchall & Ketilson, 2009), it is also important to consider that a crisis caused by a pandemic is not comparable with the past experience: such event deeply disrupted social and individual habits, directly affecting the core structure of cooperatives in both its economic and social aspects. One of the first things that emerges

from the Cooperatives Europe Report (2020) is that, regardless of the size and legislative context, all cooperatives across Europe have been impacted by the crisis: in the vast majority of cases, turnovers were lower than normal and temporary unemployment schemes had to be put in place. However, the impact varied based on the sector in which the cooperative operates, with the tourism, transport and culture sectors being among the most harshly hit. Similar responses came from the Asia Pacific region, one of the first regions to be hit by the virus: a lot of cooperatives asked for moratoria on loans, saw a decrease in sales of both services and products, faced cash flow issues, had a significant reduction of activities due to the restrictions on movement put in place under the lockdowns and loss of income in line with these restrictions (Dongre & Paranjothi, 2020). Data from some African regions, where cooperatives are mainly agriculture based, denote a substantial reduction in revenues, coming from reduced deliveries, loss of buy-

ers, lower prices, higher operational costs and loss of members (TANGO International, 2020). Recent investigations from Colombia (Confecoop, 2020) and Argentina (CoopNews, 2020) point in the same direction as the previous results.

However, there could be a silver lining to the situation: a minority of European cooperatives seized the opportunity to reconvert their activity and are doing better than before, especially medium enterprises in the health and retail sector (Cooperatives Europe, 2020). Although this is surely the exception, an increase in activities in some typologies of cooperatives can be seen also outside Europe, in countries like Brazil, USA, Argentina, Uganda, Colombia and Korea (CICOPA, 2020).

But how are cooperatives responding to the crisis? Apart from the economic results, what are cooperative businesses doing to face the crisis?

The adaptability and flexibility demonstrated during the recent economic crisis (Michie, Blasi & Borzaga, 2017) are showing during the global pandemic as well. Despite the economic downturn, many cooperatives

from every continent contributed and adapted to the situation, adopting measures to make their business more sustainable and aid society in general.

A report from the ILO (2020a) concerning the worldwide emerging responses of cooperatives, shows that many are predisposing hygiene measures, temperature controls at the entrance of their warehouses and factories or installing distancing floor markers; on the front of operation market, enterprises in some European countries, North America and New Zealand are providing teleworking opportunities, increasing pay for those working on-site during lockdowns, offering childcare services or modifying paid time-off policies. As mentioned before, agricultural cooperatives are especially important in developing countries and for this reason Fairtrade producer and consumer cooperatives have shortened supply chains so as to establish direct purchase lines between them and reduce the risk of higher food prices.

Other than being flexible, a fundamental characteristic of cooperatives is their public interest aims. During

the pandemic, many cooperatives all around the world contributed to broadening the access to Covid-19 information through surveys, messages, online resources, risk management advices, monitoring governments' help and dedicated hotlines. Moreover, agricultural and retail cooperatives are helping vulnerable people and providing essential goods to those more affected by lockdowns. Consumer cooperatives such as banks, utility providers and housing services are waiving late fees, postponing rents, offering broadband services to schools and providing low interest loans.

It should also be considered that the reaction of the cooperatives to the crisis has been supported by the measures developed by governments to help these businesses cope with the pandemic. In Italy, cooperatives work together with fintech companies in providing finance to SMEs, also supported through European funding programs. Moreover, the scheme Garanzia Italia allows non-bank financial institutions to provide loans, further easing the access to liquidity of cooperatives in need (Finextra, 2020). Provincial

governments in Indonesia put in place a purchasing power stimulus for cooperative products and liquid subsidies to coops affected by Covid-19, while Malaysia offered 6-month moratorium and restructuring of loans for all social enterprises (OECD, 2020b); In France and Canada, several funds were created to facilitate access to loans, while many other countries allowed a delay in local, income, security contribution taxes and VAT (SEWF, 2020); In the US, the USFWC (2020) requested to be eligible for the CARES Act, a paycheck protection program. To counteract excessive spikes in unemployment, many countries established job retention schemes, such as temporary layoff programs, unemployment schemes or layoff blockage. Governments have also facilitated access to information and provide useful tools for collaboration between cooperatives, private/public sector and the citizens themselves, such as the development of volunteering platforms.

THE REACTION OF LARGE COOPERATIVES TO THE COVID-19 CRISIS

Size matters more when considering the support needed to face the crisis - with small enterprises needing more immediate liquidity aid and medium/large ones requiring business planning and protection equipment – and, consequently, the measures put in place to cope with the current situation (Cooperatives Europe, 2020). Considering how relevant the size factor is, the International Cooperative Entrepreneurship Think Tank (ICETT) understood the need and importance of investigating how large cooperatives dealt with the pandemic, so as to better comprehend the differentiation of the phenomenon in this particular instance of cooperative enterprise. They thus conducted a survey of ICETT members.

The members of ICETT confirmed the need for urgent actions and business adaptation, underlining the key role cooperatives' values and principles will play in coping and recovering from the pandemic. The COVID-19 crisis has been a source of disruption in the business model of every member, requiring many organizations to adapt and create an extensive network of community support. An example from the banking sector is Rabobank, the first bank in the Netherlands to postpone the interest payments and repayments on loans for SMEs, also established a support fund for cultural and sport organisations. Similarly, the Buldana Urban Cooperative So-

ciety in India reduced its rates to lighten the weight of debt burdening the more exposed parties.

Retail cooperatives, such as S-Group and Midcounties Co-operative, are changing their business model to fit into the new safety requirements and support the most vulnerable members and customers: other than increasing e-commerce outlets, they launched foodbank funds and developed new concepts such as take-away and home delivery services to facilitate access to products. More specifically, Midcounties set up a £75k Community Restart Fund to provide immediate financial support to the group, all while working with local volunteering organizations to provide the aforementioned services, and S Group implemented a 'Click & Collect' system designed to reduce crowding and improve efficiency.

On the agricultural side, the Indian Farmers Fertiliser Co-operative Limited carried out social awareness campaigns and arranged supplies of safety equipment in several Indian regions. The Argentinian Cooperative de Trabajos Portuarios Limitada, operating in the sector of port and maritime services, focused on ensuring that at-risk workers receive an increased remuneration while preserving their health.

Worker cooperatives such as Smart Belgium developed 0% credit mechanisms and training plans for its members, helping them to be more resilient during and after the pandemic. Likewise, The Kibbutz Movement in Israel protected its unemployed members with economic assistance and provided the elderly and children with

social support, supplies and recreational activities, initiatives made possible thanks to the structured solidarity mechanisms that was able to cater to the needs of members requiring assistance. Other than these more immediate actions, ICETT's cooperatives have planned both medium- and long-term ventures, recognizing that the crisis will affect the socioeconomic framework well after a vaccine is found. In this spirit, other than the measures mentioned above, Midcounties developed re-

vive and thrive plans across all their trading groups, to build cooperative solutions for the future via the Community Restart Fund, surveys and virtual events. Similarly, the Indian

Farmers Fertiliser Co-operative Limited implemented a range of long-term measures like flexible office time schedules and rotating home working programmes to support colleagues while continuing operations.

The peculiar characteristic of all these initiatives is the profound bond they have with cooperative identity and values: the Mondragon Corporation underlined the importance of the cooperative network during the crisis, as it enabled the development of shared and participated solutions, like increasing health and safety protocols. Along this line, the insurance cooperative

Sancor Seguros Group highlighted the positive impact that cooperative principles played in gaining the trust of customers, trust obtained through its contributions to the community during the pandemic.

The Covid pandemic deeply impacted day to day operations in large cooperatives: the introduction of extensive smartworking practices, social distancing measures and the lack of tangible connections took a toll on the business model and operativity of many or-

ganizations. The imperative of protecting both the economic and the health status of the stakeholders while continuing the provision of products and services was the most challeng-

ing priority for the majority of the ICETT members. However, the measures pursued and the responses adopted proved once again the great resilience of the cooperative business model. The values and principles at the core of the cooperative identity contributed to the efficient and effective adaptation of these enterprises to unpredictable and often extreme conditions, still maintaining a clear focus on what matters most: supporting economic recovery while rebuilding businesses and communities.

The COVID-19 crisis has been a source of disruption in the business model of every [ICETT] member, requiring many organizations to adapt and create an extensive network of community support.

| CASE STORY SMART**HELPING FREELANCERS THROUGH THE COVID CRISIS**

Founded in Belgium in 1998 for artists, Smart today is a cooperative of freelancers active in different fields. Based on the idea of offering these workers the solutions to overcome bureaucratic obstacles and mutualise means and risks, the cooperative is now operating in 9 European countries and currently counts 35,000 members. More precisely, Smart takes charge of all the administrative, financial, and accounting aspects linked to work, while ensuring a double solidarity: the one linked to the status of workers (salaried worker) and to the mutualization of means. This is crucial to the Smart model, especially enabling freelancers to become salaried workers. To do this, other than a yearly 30 euro share, the cooperative gets a fair and fixed percentage (that varies by country) on every euro handled for its members in various contractual arrangements to cover managing costs and invest in mutualized services (advance on payment, adapted insurances, training, co-working space, tailor-made advice, and workshops). In this way, the freelancer only has to focus on his/her knowhow, leaving the administrative aspect of running a business to Smart. This straightforward business model is further reinforced by the policy of transparency and participatory governance. For this reason, Smart considers itself a shared enterprise.

While the cooperative is open to all fields of activity, half of its members work in the cultural and creative sector, one that has been thoroughly impacted by the COVID-19 crisis, especially in Europe. As the European Parliament

(2020) specifies, cultural employment is precarious by nature, and the pandemic worsened this situation: the individual artists, due to safety measures and restrictions, have been among the first being put in lockdown in many parts of the continent and have suffered severe economic consequences. In France, where many offices of Smart are located, “arts and leisure” have been the hardest hit sectors of the economy (Barrot et al. 2020), while an OECD study (2020) shows a dramatic drop in spending on recreation and culture in the UK, Germany, France and Italy. Similarly, Smart observed a drop in the activities of its members between 10 and 90%, equivalent to the loss of more than 90,000 working days, since the start of the crisis.

As a response, the cooperative launched the Plan Corona, a comprehensive 5 million euro plan of action that aims to offer both support measures, as a response to the cancellation of several activities, and recovery stimulus, to help growth in the post-COVID world. The solidarity plan consists of a strategy regarding cancelled performances, support measures, solidarity mechanisms and promotion of a dynamic recovery. The initiative was firstly promoted by the cooperatives operating in Belgium and France with a press conference on the 1st of April. The first draft of the plan was then developed by the office in Milan since it had been one of the most affected areas during the first wave of the pandemic in Europe. The plan designed in Belgium and France, is to implement support measures consisting

of a compensation method for all the members that are victim of cancellations caused by the emergency and temporary unemployment programs for salaried entrepreneurs with permanent contracts as well as, when possible, for those with short contracts. Furthermore, according to its aim of promoting sound economic activity, the cooperative plans to anticipate financing to artists that are trying to reopen their activities by investing, for example, in equipment or marketing. At the same time, Smart has called for the same measures internationally and is focused on preserving the assets of the international Smart entities established in the EU by confirming the commitment to finance the development of Smart and the continuation of activities. Smart has also established a regular COVID information ex-

change mechanism to monitor the impact and to keep its members updated about support measures from governments and public institutions.

To implement these solutions, Smart is working with other organizations, cooperatives and stakeholders, and has structured the plan in a way that will allow it to be reinforced by other actors interested in doing so, from public institutions to private individuals. An example of this willingness to join forces can be seen in the activities conducted within Bigre!, an association that enables intercooperation between cooperatives especially in the fields of training and knowledge and with whom "*Le Fil Cooperatif*" was established, a helpline to provide a listening service for those who need it during quarantine. Moreover, a platform specifically dedicat-

ed to informing the Smart community has been created (*Kronik*), in which whoever desires to contribute can do so and where Smart offers training and information sessions.

The common denominators to all these initiatives are the principles of solidarity and mutualism, so that the freelance community can continue to resist to the crisis and thrive even more once it passes. Given that Europe is in the midst of a second wave, it is still too early to assess the precise quantitative impact of the Corona Plan. However, in September, Smart confirmed that, despite turnovers still falling by 26.5% in Belgium and 34% in France, the trend is indeed toward a gradual improvement and is following the forecasted curve, which Smart attributes in part to the cross-sector solidarity. They also announced additional measures, mainly focused on boosting economic activities of members, like a training program with an economic focus and a 0% internal credit system until the end of 2021 (negotiated thanks to support from public authorities). Smart also keeps updating its stakeholders about the measures adopted by governments in each

country. Finally, the cooperative is also working at a more central level, as it recently met with the European Commission to discuss about improvements of the conditions and tutelage of freelancers. From this analysis, it is possible to see that, although lacking (for now) precise figures, the Plan is indeed contributing to the alleviation of the economic and psychological toll on its stakeholders and society in general. Concerning future developments and perspectives, Smart has yet to release an official statement about the changes in the Corona Plan, but it guarantees the total dedication to the support of the community, as the recent lobbying actions and set of suggestions to protect workers directed at the Belgian government proves. The recognized limitations of the Plan, the pervasiveness of the crisis and the uncertainty about the future are the most prominent obstacles to the success of the initiative, but Smart continues to strive to extend the coverage of the plan, so as to protect as much as possible vulnerable stakeholders from falling through the cracks of a shattered economy.

CONCLUSIONS

This brief overview highlights some of the effects, cooperative responses and government actions during the present Covid-19 crisis, so as to evaluate how the pandemic has been impacting cooperative enterprises. The overall result of the analysis is that despite being thoroughly affected by the crisis, cooperative businesses prove once again to be resilient in times of trouble.

The impact is being felt both at the economic and social level, but the core values of general interest and cooperation have been upheld all around the world, although with particular difficulties in some places, as the adaptation of production chains for the supply of medical equipment and interaction with the public sector has shown.

Given the still limited available data, it is difficult and unwise to offer a one-size-fits-all description of the global situation. Therefore, it is advisable for both governments and private institutions to conduct surveys and investigate what cooperatives need the most during

Despite the economic downturn, many cooperatives from every continent contributed and adapted to the situation, adopting measures to make their business more sustainable and aid society in general.

this second wave of the crisis. Once the key issues have been identified, policymakers and financial institutions could put in place more effective countermeasures.

In the short-term, access to liquidity seems to be among the top priorities for small and medium cooperatives, while larger organizations will also need more logistical support, with the provision of protective equipment for all the employees at risk. However, this pervasive and widespread global crisis will also require preparation

for the aftermath, requiring governments to put in place more long-term policies. Given the resilience and preparation shown by the cooperative sector in every continent, poli-

cymakers will have the responsibility to work toward a fairer economic system, more socially and mutually oriented. Future research will provide more homogeneous and reliable data, allowing a better understanding of the true impact of the pandemic on cooperatives. It is indeed a challenging period, but also an opportunity to prove the importance of developing a more social economy and the validity of the cooperative business model.

**CLIMATE ACTION -
WHAT LARGE
COOPERATIVES CAN DO
TO MEET SGD 13**

A decorative graphic in the bottom-left corner of the slide. It consists of several overlapping, curved bands. From top to bottom, the colors are dark teal, white, and red. The lines are thick and have rounded ends, creating a modern, abstract design.

Although the Paris Agreement on climate change has set clear targets for reducing global warming by cutting the greenhouse gas emissions by 45% from 2010 levels by 2030 and reaching net-zero emissions by 2050, the data on emissions still reveal contrasting trends in different areas of the world.

Industrialized and transitional countries recorded a total decline of 6.5% in emissions between 2000 and 2018, but developing countries reported the opposite trend due especially to greater industrialization, with an increase of 43.2% in emissions from 2000 to 2013. And the situation has not improved in the past two years. 2019 proved to be the second hottest year ever recorded and, although the pandemic reduced emissions in the early months of 2020 (-6%), this reduction far from guarantees the achievement of the agenda objectives (United

Nations, 2020).

It has become clear that all these data raise concern not only for the outsized impact that climate change has on the environment, but also on people's lives and the economy. Indeed, recent years have been characterized by a rising number of strong natural events, such as wildfires, hurricanes, and other climate disasters across the continents whose increased frequency and violence can be attributable to climate change. UN data shows that, in 2018, more than 39 million people were affected by natural calamities and disasters (United Nations, 2020). Looking at the European Union, between 1980 and 2017, damage from weather- and climate-related calamities exceeded 425 billion euros, with an increase of 7.6% in the last five years alone. Furthermore, the European data show how the variability of the events—

with 70% of the total damage attributable to only 3% of the events—makes it even more difficult to forecast and manage the events themselves (European Union, 2020). Moreover, it should be considered that the increasing number of natural disasters, and more generally speaking global warming, are making some areas of the planet less habitable by threatening access to drinking water, lead to an accessible location of arable areas and thus put millions of people in a condition of extreme poverty and precariousness. (Abeygunawardena et al., 2009). In this scenario, climate change could raise the number of people in extreme poverty up to 122 million by 2030 (Rozenberg and Hallegatte, 2015).

Nevertheless, it has been evident that in the last year, due to the pandemic, environmental sustainability and other sustainable development goals (SDGs) have been somewhat buried in government agendas. In just a few months, COVID-19 has threatened many of the results achieved over the last years on the front of poverty and hunger reduction, health care and education and thrown millions of people - especially the most fragile and those in precarious conditions - into a situation of health, social and economic uncertainty (UNDESA, 2020).

Sustainable development, however, is more relevant than ever. The pandemic's effect should therefore push countries to stay on course and not abandon the efforts made so far to reach the objectives of the 2030 agenda. As reiterated by António Guterres, Secretary-General of the United Nations (UN), "Everything we do during and after this crisis [COVID-19] must be with a strong focus on building more equal, inclusive, and sustainable economies and societies that are more resilient in the face of pandemics, climate change, and the many other global challenges we face." (UN, 2020).

Considering all this, it is plausible to assume that the recovery period that will follow the pandemic will offer an opportunity to accelerate the transition to a greener and more sustainable economy and, in this transformation, the contribution of cooperatives will be fundamental.

As recalled by the director of the International Labour Organisation (ILO) on the launch of the 2020 International Cooperative Day, "One of the things this pandemic has done is to remind us just how closely the world of work is connected to climate change and therefore of the central role it must play in combating it. It's precisely because the cooperative model aligns short-term

actions with long-term vision that it can give us precious insight into how to confront global crises, be it pandemic or climate change” (ILO, 2020b).

There are many examples of how cooperatives already contribute to building a greener society. In Africa, cooperatives have supported local communities in the fight against deforestation (Committee for the Promotion and Advancement of Cooperatives, n.d.). Elsewhere, agricultural cooperatives have supported communities in responding to and reducing the impact of natural disasters related to climate change as well as supporting local farmers in adopting more efficient, sustainable farming practices (Food and Agriculture Organisation, n.d.). Energy cooperatives have offered sustainable technologies to produce clean energy (ILO, 2013), and consumer cooperatives have committed themselves to guaranteeing more sustainable production chains and reducing waste (Eurocoop, 2012).

Furthermore, by operating in different sectors, cooperatives can establish collaborations to address climate change on several fronts that contribute to the construction of a zero-carbon economy (Sustainability Solutions Group, 2014). This is even more evident in the

large cooperatives that, operating in many sectors and interacting with many suppliers and partners, can promote large-scale initiatives to build low-greenhouse-gas (GHG) emission and climate-resilient economies and societies.

LARGE COOPERATIVES AND CLIMATE CHANGE

Having said that, the next paragraphs will present examples of actions by large cooperatives to combat climate change focusing on the actions put in place to respond to the targets of SDG 13 – Climate Action.

Among the objectives of the 2030 agenda, SDG13 is the one explicitly dedicated to the fight against climate change with a focus on climate change mitigation and adaptation. However, climate change mitigation and adaptation are only a small part of the contributions that cooperatives can make to the environmental protection of our planet. As highlighted by several studies (International Council for Science, 2017; UN, 2018) the 17 SDGs are strongly interconnected. To fully understand how cooperatives contribute to environmental protection, then, we must deepen not only the contribu-

tions directly connected to SDG 13 but also the contributions that cooperatives can make to the protection of life below water (SDG 14), life on land (SDG 15), and to the production of clean, affordable energy (SDG 7). Only an integrated analysis of the SDGs can offer a complete picture of the real contributions of cooperatives on the environmental front. Nevertheless, the examples discussed in the next paragraphs clearly demonstrate how the contributions of cooperatives can be fundamental on several fronts, helping the progress toward a carbon-free society.

The examples are collected from annual reports and sustainability reports¹ of the top-300 cooperatives and by looking at the results of a survey conducted by the ICETT among its members aiming at collecting information on the programs or policies these cooperatives have introduced focused on Climate Action.

To collect comparable data, the analysis focuses on reports complying with the guidelines of the Global Re-

porting Initiative (GRI).² The analysis examines a selection of GRI indicators that, according to the guidelines of the Sustainable Development Goal (SDG) compass project,³ are relevant to climate change (SDG 13). Limiting the analysis to the 2018-2019 annual and sustainability reports complying with GRI standards also considerably limits the number of cases examined. Of the 300 cooperatives in the ranking, only 40 are present in the online GRI database. Of these, only 32 compose their reports using the GRI indicators. Despite these limitations, the examples provide interesting insights into the contribution that cooperatives can make toward achieving the objectives of SDG 13.

CLIMATE MITIGATION

Reducing GHG emissions that originate in human activity is the key goal of climate mitigation.

Large cooperatives contribute widely on this front, not only

¹ Basing the analysis on annual and sustainability reports has both advantages and limitations. Given the difficulty of collecting data directly from organizations, their annual and/or sustainability reports are the most complete sources of extra-economic data on them. However, reports necessarily underscore some actions that organizations have implemented, not necessarily every action.

² "GRI helps businesses and governments worldwide understand and communicate their impact on critical sustainability issues such as climate change, human rights, governance and social well-being" (<https://www.globalreporting.org/>).

³ The SDG compass (www.sdgcompass.org) is a project jointly developed by the UN Global Compact, the GRI, and the World Business Council for Sustainable Development (WBCSD) that "provides guidance for companies on how they can align their strategies as well as measure and manage their contribution to the realization of the SDGs."

reducing their own emissions by taking action in their day-by-day operations but involving all the players in production chains in medium-to-long-term projects, leveraging their suppliers, members, and customers to adopt low-carbon technologies and more sustainable behaviours.

This is the case, for example, of the Co-operative Group, which aims to reduce its emissions by 50% by 2025 (compared to 2016 levels) and to reach zero emissions by 2050. For the cooperative, however, it is not just a question of reducing emissions but also of improving the efficiency of its entire production chain. For this reason, the Group launched the Co-op Enviro Map project in 2016, a three-year project that aims to measure and improve energy efficiency by reducing the carbon footprints of their supplying farms.

The S Group is also on the same path, aiming to be the first carbon-negative Finnish company by 2025. To achieve this goal, the Finnish cooperative group aims both at energy efficiency and greater use of wind and solar energy. However, the S Group has estimated that 90% of emissions are produced during product-manufacturing and use phases, so it has involved 107 partner companies in the Big Deal climate campaign to reduce climate emissions by one million tons by 2030—equal to (as estimated by the cooperative) “eight million trips

by car from Helsinki to Rovaniemi, or the annual carbon footprint of 100,000 people in Finland.”

In some cases, cooperatives’ actions synergize with those of public administrations to transition entire territories toward clean energy. For example, KREAN (a cooperative of the Mondragon Group), has started collaborating with the local energy agency on the construction of a solar energy park (55 hectares, 67,000 panels, 24 MW installed, and 26 investment companies) in Basque country.

Speaking of climate change mitigation, one cannot fail to touch on the issue of plastic. Disposing of plastic is a major problem for our oceans, where more than 8 million tons of plastic are dumped every year (United Nation Environment program, 2017). However, plastic pollution of the oceans is only one problem associated with its production and use. The entire life cycle of plastic is linked to GHG emissions, from its production to disposal.

The problem of plastic and its disposal is an important issue among consumer cooperatives. For example, the Midcounties (see box below) and MIGROSS (Switzerland) are working on reducing the plastic contained in packaging or permanently replacing it by optimizing packaging, expanding plastic-recovery systems, and containing waste.

INTERVIEW WITH PETER WESTALL

CHIEF VALUES OFFICER AT MIDCOUNTRIES CO-OPERATIVE

Midcounties Co-operative is a UK consumer cooperative in the retail sector. Peter Westall is also leading the ICETT Working Group 3 focused on the World Cooperative Monitor and SDG 13.

How does being a cooperative influence Midcounties' actions on climate change?

Coop Midcounties is one of the largest consumer co-operatives in the UK. In line with all co-operatives across the world, we are owned and controlled by our members. Our Board is made up of elected members, with responsibilities including setting the Society's objectives and strategy, monitoring delivery of that strategy by management and ensuring that the Society adheres to Co-operative values and principles. Our Executive team, led by our Chief Executive Phil Ponsonby, report into that Board. That Governance structure, and my Executive role as Chief Values Officer, is there to ensure that every aspect of the Society – from commercial decisions to culture and ethos – has members and member voices always at the forefront of thinking and co-operative values fully integrated. We launched the "Your Co-op Voice" programme two years ago to improve the feedback we get from our members. Since then we have actioned nearly 100 surveys, receiving almost 40,000 responses from members on a range of issues central to the development of our plans.

Our member-owners have told us that climate action is a real priority to them, and that they want to be able to work with us to understand what they can do, what we can do and what we can all do together to take action on Climate Change. In response, we launched our "1 Change" campaign.

What are the key aspects and results of your 1 Change campaign?

Our 1 Change programme focuses on working with our members, colleagues and communities to drive transformational change to support climate action. Many of the over 1,000 '1 Change' pledges made by our members was around re-using waste plastics in some way. Members created "eco-bricks", which were used by one of our community partners, Fairy Tale Farm in Oxfordshire, to build animal houses. That simple example helped educate local school children, as well as their parents, of practical uses of waste plastic rather than disposal. In addition, we worked with members to set up collaborative community tidy up activities, enabling over 700 volunteers to tidy up 380 bags of litter from the natural environment.

Our members also told us of the '1 change' they would like Midcounties to make to take climate action. We used that feedback to shape our environmental commitments. This has resulted in a range of positive impacts including reducing over 2 tonnes of plastic from our operations per year, and replacing single use plastic carrier bags with compostable bags across all of our Food Stores, reducing 8 million plastic bags per year.

What are the future prospects for the initiative?

Our 1 Change programme will be a catalyst to further engage our members and communities in helping to achieve the UN

Sustainable Development Goals by driving behaviours around issues such as climate action, responsible consumption, and helping to build sustainable communities.

Increasingly, we are using member insight to influence the development of values led products and services. Our members have told us that they want us to support community renewable energy, and to help increase the amount of community energy generated in the UK. In response, our Co-op Energy trading group have launched our Community Power tariff – at the time of writing, the UK's only consumer product providing 100% community-generated green energy. This forms part of our wider Co-op Community energy initiative, which sees us working with over 90 community energy groups across the UK to provide a route to market for unsubsidized community energy generation.

We also aim to inspire our younger members and indeed the next generation of co-operators by working with our 50 partner schools to educate around climate action, helping to develop and showcase Co-operative solutions to the UN Global Goals.

What is the value in sharing best practices like this one within the cooperative movement?

The International Cooperative Alliance Statement on the Cooperative Identity notes as Principle 6 that Cooperatives

serve their members most effectively and strengthen the cooperative movement by working together through local, national, regional and international structures. The sharing of best practice amongst all of us is fundamental to ensuring co-ops remain relevant and effective for all our members.

Our membership of ICETT has benefited us through learning from other co-ops around the world, and this best practice sharing has helped us develop our own climate change projects.

We have also enjoyed hosting visits from other co-ops to share our activity, including hosting a visit from Rabobank last year to share best practice around our approach to climate action and how we are helping develop sustainable communities. We were delighted to be asked to share our '1 Change' Climate Action programme earlier this year at a joint webinar between the ICA and UN, to share how we have engaged members to take collective action to help tackle this issue.

The sheer scale and size of the global co-operative movement, and of the social and economic impact it has, is demonstrated in this, the World Cooperative Monitor. That collective impact places our movement and each and every co-operative in a unique position to raise member awareness & political influence on the importance of so many subjects, including the UN Sustainable Development Goals both today – and long into the future.

CLIMATE CHANGE ADAPTATION: BUILD KNOWLEDGE AND CAPACITY TO MEET CLIMATE CHANGE

However, the contributions that large cooperatives can make to combating climate change do not end with concrete actions in their companies or production chains to reduce GHG emissions. Cooperatives actively contribute by raising awareness of the risks associated with climate change, not only to the environment but also to public health and production and by supporting communities and people damaged by natural disasters caused by climate change.

Looking at actions aiming at raising awareness, several examples can be found among cooperative initiatives to encourage employees, shareholders, partners, suppliers, communities and customers toward more environmentally aware behaviour.

IFFCO and the Buldana Urban Cooperative Credit Society have focused on engaging communities to plant trees and raising awareness of their importance in the next generation. The two cooperatives joined the “Go Green Campaign” launched by the ICA Asia and Pacific Committee on Youth Cooperation to promote awareness of climate change, SDG 13, and the importance of planting trees.

In some cases, the aim of raising awareness is broader, encouraging companies and customers to take more environmentally sustainable actions. For this reason, the Talanx Group has been developing a Group-wide ESG screening pro-

cess since 2016 by which almost 90% of the Group’s investments under self-management are rated according to their compliance with the UN Global Compact to retain or divest holdings considering the environmental impact.

Moreover, starting in 2018, Talanx no longer invests in companies that derive more than 25% of their revenue or generate more than 25% of their power from coal. Along the same lines, Rabobank (see box below) has also adopted rating policies to encourage its customers to adopt more sustainable behaviours.

Finally, talking about climate change vulnerability and the capacity to meet climate change, cooperatives actively contribute by supporting communities and people damaged by natural disasters caused by climate change.

The Co-operators in Canada, for example, integrates technology, modelling, and analytics to “better quantify risks and build the personal resilience of [their] clients.” Likewise, the Sancor Seguros Group in Argentina has organized teams of volunteers that offer psychological support to the victims of disasters, whether due to human or climatic causes, in the context of the workplace. They seek to contain and accompany the insured, their families, and co-workers to mitigate the emotional impact, facilitate social reintegration, and restore routines. In this way, the early recovery and quality of life of those affected are favoured, preventing the development of chronic pathologies, the multiplication of victims, and the judicial processes of claims.

RABOBANK - INNOVATIVE BANKING FOR CLIMATE CONSCIOUSNESS

IN 2019:

EUR **45.4 million**
(2018: 48.8) for future investments
in the local community.

EUR **45.4 million**
(2018: 48.8) for future investments
in the local community.

AGRI3 fund: partnership with UN
Environment to make a facility of USD
1 billion available to help farm-
ers switch to more sustainable farming
and reforestation methods.

Accounted for **4.1 billion** Euro
through project finance in investments
in sustainable energy generation

46 billion Euro in sustainable fi-
nance with over 200 million Euro issued
in impact loans to businesses with a
meaningful sustainability label.

Rabobank started calculating its CO2
footprint in 1998, and its offices have
been **100%** climate neutral since
2007

Rabobank is a financial services cooperative rooted in the Dutch agricultural sector. Born from small agricultural cooperative banks founded in the late 19th century, Rabobank today is active in 39 countries with over 40,000 employees worldwide. It provides financial products and services to customers in Retail Banking, Wholesale Banking, Rural Banking, Private Banking, Vendor Finance, Leasing and Real Estate. No matter how large it grows and diversifies across the food and agriculture sector, Rabobank remains committed to its founding principles and to making a difference in society.

One of the ways Rabobank attempts to make a difference is through meaningful contributions to achieving the UN Sustainable Development Goals (SDGs). To ensure the actions remain a priority and the bank's decisions reflect this, Rabobank has embedded contributing to the SDGs into their strategic planning. Examples of specific actions the group is taking include financing the food and agriculture sector to help boost the world's food supply, actively financing and investing in sustainable energy generation, instituting a Circular Business Desk for clients, increasing sustainability-linked products and

financing sustainable housing solutions, and establishing key partnerships both in the Netherlands and beyond to support sustainable agriculture on a large scale. In 2019 Rabobank participated in a group advising the European Commission on the SDGs contributing to the adoption of a Reflection Paper “Towards a Sustainable Europe by 2030”.

With most of their members in the food and agriculture sector, Rabobank places a special importance on environmental protection and the SDG 13 goal, climate action, recognizing the urgency to act. In 2019, Rabobank contributed substantially to the establishment of the Dutch Climate Agreement and together with 50 financial institutions signed the Climate Commitment Financial Sector which commits to the Dutch Climate Agreement. To further climate action response Rabobank is also committed to the Paris climate goals and the U.N. Principles for Responsible Banking. Rabobank’s commitment also extends through the work of the Rabobank Foundation with, for example, support to over 5 million smallholder farmers in Africa, South America and Asia. But to instill a climate change mindset within the entire organization, Rabobank has set up a company-wide Climate Program led by the Managing Board, which has installed the Rabo SDG Banking Committee to ensure Rabobank’s climate ambitions are met.

The cooperative also believes in the importance of change starting from the ground up, and knows that in order to be a leader in the energy transition and climate smart agriculture, it must also empower its clients and members to prioritize sustainability. Most recently, starting from the Sustainably

Successful Together (SST) program, which set Rabobank’s sustainable development goals from 2015 to 2020 through concrete corporate targets incorporating sustainability in the organization, Rabobank then further developed the program to promote an all-encompassing change of perspective in both corporate and retail clients.

The program established 14 corporate key performance indicators (KPIs), divided into five thematic areas focused on communities, sustainable agriculture and food supply, corporate clients, retail clients, and the cooperative’s efforts. To ensure coherence across the organization the program also focused on increasing employee’s sustainability awareness by providing sustainability training to staff and management at local Rabobanks, to corporate bankers and to retail advisors. Reaching the end of the established timeframe, Rabobank renewed its commitment by developing the Rabobank Sustainability Ambitions 2020 – 2024 (the medium-term plan) and launched “Growing A Better World Together” as its mission, further highlighting its ambition to integrate sustainability into the bank’s core business. The goals established by the medium-term plan have been organized into five themes as focal points and are explained in a published booklet available online¹. The first, “From Trend Analysis to Vision Development”, aims to develop long-term sustainability visions for each sector, which will serve as a foundation for Rabobank’s sector policy, helping inform the decision of which sectors to reduce, maintain or expand.

The second theme builds upon one of the successful out-

¹<https://www.rabobank.com/en/images/rabobanks-sustainability-ambitions-2020-2024.pdf>

comes of the Sustainably Successful Together programme, the Client Photo. This sustainability assessment tool for corporate clients will be further developed into an “e-rating” client profile giving a sustainability score and measuring the client’s impact on the SDGs. Rabobank intends to utilize this tool during the client-acceptance processes.

The third theme, “From Performance Optimization per Client to Transition Banking”, focuses on an analysis and scoring methodology of client sustainability performance and SDG impact aiming to increase the number of clients who have a positive SDG impact and financial performance and persuade and support clients to make the transition to a sustainable way of doing business. “Distinctive Products and Services”, the fourth theme, focuses instead on the product side, with the aim of developing more products that contribute to Bank-

ing for Food (helping the agri-food sector meet the global demand for food) and Banking for the Netherlands strategies and at the same time helping reduce Rabobank’s indirect CO2 footprint. Lastly, in a further sign of commitment to sustainability across the entire organization, the fifth theme, “Integration in Performance Management”, deals with recruitment, training and performance management practices. Rabobank recruits staff with a proven interest in sustainable and cooperative banking and supports the professional development and training of colleagues in sustainability.

Some of the key successes and results coming from the Sustainably Successful Together and Rabobank Sustainability Ambitions initiatives include increased investments in the local community and the continuous development of products and services that help Rabobank’s clients mitigate climate

risks and green their activities. An example of these products and services comes from the housing sector, where Rabobank encourages and finances energy efficiency in homes and supports local energy cooperatives generating sustainable energy. In the food and agribusiness sector Rabobank is working in partnership with the United Nations Environment Programme Finance Initiative (UNEP FI), the World Business Council for Sustainable Development (WBCSD), the Food and Agriculture Organization of the UN (FAO), the World Wildlife Fund (WWF) and others on a science-based targets-based measurement system for greenhouse gas emissions. Rabobank is attentive to invest in funds that share its climate vision, for example the F&A Innovation Fund and SHIFT Invest. Additionally, Rabobank is partnering with Samen Tegen Voedselverspilling (a Dutch Foundation whose mission is to limit food waste in the Netherlands) helping to save 61 million kilos of food a year in Dutch restaurants.

Rabobank's work with SMEs to promote transitioning into circular enterprises has also been a key activity over recent years. With assistance provided through the Circular Business Desk, knowledge creation, networks, financial solutions, and circular economy challenges, Rabobank is helping its clients transition to a circular economy. In 2019 alone, 107 Circular

Entrepreneurship Challenges were held in seven regions in the Netherlands to actively support an additional 250 entrepreneurs developing circular action plans.

To monitor progress on all fronts, the governance committee established indicators on progress and works with the Program Office and individual departments to report on targets. For example, Rabobank reports on its own carbon footprint and sets annual targets to reduce it. However, accurately measuring impact can be a challenge. For example, while Rabobank works to encourage reduced emissions from its clients, there is not always an agreed-upon scientific methodology for certain calculations, such as carbon sequestration in agriculture, a sector in which calculating carbon emissions can be complicated. But Rabobank continues to contribute to developing climate impact measures and promoting their use among its clients. In the words of Berry Marttin, member of the Rabobank Managing Board, "We can and will make a difference as a financial services provider – by providing financial solutions with climate-related products and services – and also through our network and by sharing knowledge. This is not easy and we are definitely not ready yet, but we accept the responsibility and see the opportunity to become an even more meaningful service provider for our members and clients."

CONCLUSION

Through this research, we see some actions undertaken by large cooperatives to actively contrast climate change, and many more examples surely exist within the cooperative movement.

Examples in the previous sections show that the strength of large cooperatives lies precisely in the magnitude of the actions implemented. Promoting change does not only mean acting on the enterprise's day-to-day operations, but it means promoting awareness-raising actions pushing their partners, members, and communities to adopt more environmentally aware behaviors. It also means supporting communities and vulnerable people in climate vulnerability, too. The examples analyzed highlight only a part of the contribution that cooperatives are making to environmental protection.

“One of the things this pandemic has done is to remind us just how closely the world of work is connected to climate change and therefore of the central role it must play in combating it. It’s precisely because the cooperative model aligns short-term actions with long-term vision that it can give us precious insight into how to confront global crises, be it pandemic or climate change.”

ILO Director- General, Guy Ryder

Many other actions could be highlighted by looking at the targets of other SDGs such as the fight against poverty reduction, soil and ocean protection and much more.

But we need data to prove such contributions. It is not enough to say cooperatives are environmentally and socially responsible businesses without the data and analysis to demonstrate it. Cooperatives must communicate the actions that demonstrate their fundamental nature as ethical businesses both within and beyond the cooperative movement. The more they participate in reporting

initiatives that enable the collection of reliable and internationally comparable data, the more research and analysis can be done to demonstrate their social and economic impact.

2018 RESULTS AND RANKINGS

The World Cooperative Monitor is a project designed to collect robust economic, organisational, and social data about cooperatives, mutual organisations and non-cooperative enterprises controlled by cooperatives worldwide. It is the only report of its kind collecting annual quantitative data on the global cooperative movement. The data collected for the

2020 edition of the World Cooperative Monitor is from the year 2018. The primary sources of data include annual and sustainability reports, existing databases of economic data, data collected by national associations, research institutes, and other organisations, and the use of a questionnaire to collect data directly from enterprises.

Data for 2018 comes from:

This report presents rankings based on turnover as well as the ratio of turnover over Gross Domestic Product (GDP) per capita. The ratio of turnover over GDP per capita measures the turnover of the Top 300 cooperative and mutual enterprises in terms of the purchasing power of an economy, relating the turnover of the enterprise to the wealth of the country. It does not compute the contribution of each enterprise to the national GDP. Rather, it measures the size of the enterprise in its national context. Employment data is also presented for the Top 300 where available.

The following results focus on the top 300 in the database, which are distributed geographically as shown in the map on the following page. The sectors with the most organizations present in the Top 300 are agriculture and food industries

(104 enterprises) and insurance (101 enterprises) followed by wholesale and retail trade (57 organizations). However, considering the weight of the enterprises by sector based on turnover, the insurance sector covers 34.5% of the total turnover (758.54 billion USD), followed by agriculture (532.11 billion USD, equal to 24.2% of the total turnover of the Top300) and wholesale and retail trade (459.36 billion USD, equal to 20.9% of the total Top300).

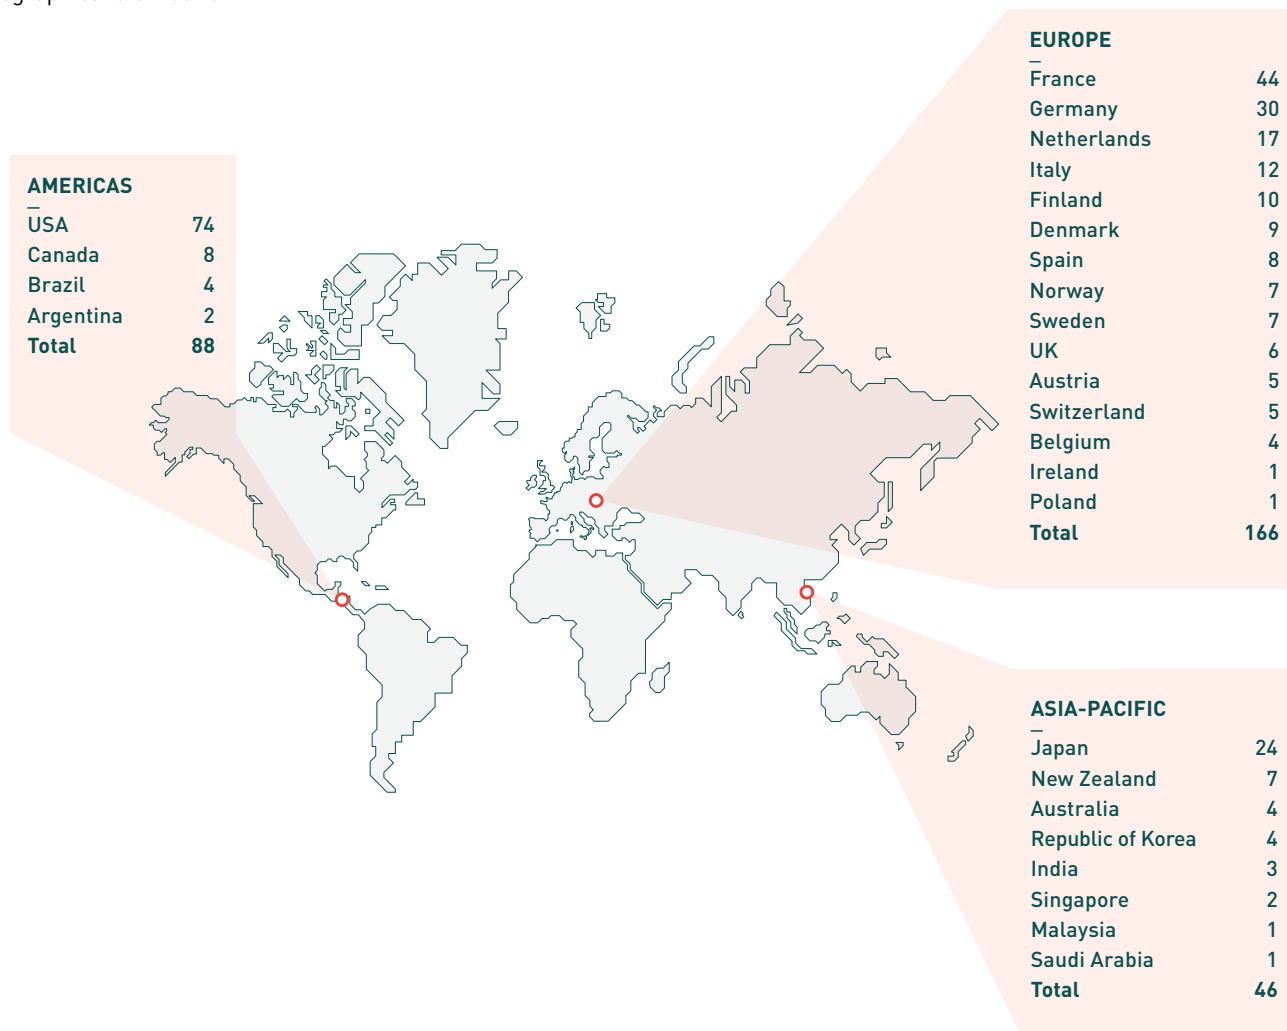

With regards to type, the majority of enterprises are producer (133, to which is added one producer/consumer), followed by mutual (83) and consumer/user (65). 13 of the top 300 are non-cooperatives controlled by cooperatives, while only 3 are worker cooperatives and 2 are multi-stakeholder cooperatives.

METHODOLOGY AND DATA SOURCES

The methodology for the 2020 World Cooperative Monitor is briefly described below, the full version is available at www.monitor.coop. A summary of the population under study, data collection, classifications and methodology of the rankings is provided. The methodology of the chapter on SDG 13 is within the chapter.

WHO IS SURVEYED

The project collects data on large cooperative enterprises and aggregations of cooperatives, mutual, and non-cooperative enterprises in which cooperatives have a controlling interest. The project focuses on units that carry out economic activity for the production of goods or services for their members. Cooperative unions and federations that mainly carry out lobbying, representation, and protection of the interests of associated cooperatives are not covered by the project.

The organization types to be surveyed are currently under revision by the World Cooperative Monitor team and Advisory Committee to better compare organizations across countries, sectors, and types. The difficulty lies in the fact that finding a definition that is shared by different countries is complicated. There are very different regulations and laws between one country and another in this regard and finding a way to define all organizations through a unique classification, which can at the same time take into account and enhance the peculiarities of the different systems is complicated and challenging. Moreover, cooperatives that enter the top 300 classification of the WCM, given their size, are real giants from an economic point of view and therefore their structure is in most cases very complex and branched. On

this point a continuous exercise of refinement over the years, is leading to a continuous improvement of the data collected.

CLASSIFICATIONS

The project classifies the cooperative organisations by economic activity and cooperative type (International Labour Organisation, 2018).

Information on the economic activity or industrial sector of each organisation is collected and classified into ten categories, each of which mainly reflects the structure of ICA sectoral organisations. The classification into the ten categories is determined by the International Standard Industrial Classification of All Economic Activities (ISIC) or regional and national equivalents class, in which the activity of the cooperative is included. If a cooperative combines two or more economic activities, the main economic activity is identified following international methods and standards.¹ In the sector rankings, some economic activities are combined to form more general sectors, as described in the rankings paragraph.

Units are also classified based on the main interest of their members (Table 1).

¹“The principal activity of the unit in general can usually be determined from the goods that it sells or ships or the services that it renders to other units or consumers. [...] Ideally, the principal activity of the unit should be determined with reference to the value added to the goods and services produced. The relevant valuation concept is gross value added at basic prices, defined as the difference between output at basic prices and intermediate consumption at purchaser’s prices.” (UN 2008, p. 20).

TABLE 1.

Cooperative type classification

Producer cooperatives	The main interest of the members is related to their production activity as enterprises in their own right. The members typically comprise household market enterprises such as small agricultural or craft producers but may also include corporations.
Worker cooperatives	Members share an interest in the work which is provided by or ensured through the cooperative. The members are individual workers (worker members) whose jobs are directly assured through their cooperative.
Consumer/User coops	Members are the consumers or users of the goods or services made available by or through the cooperative. Financial service cooperatives are classified as part of consumer/user cooperatives even if these cooperatives also service producers.
Multi-stakeholder coops	A cooperative which has more than one type of member with significant involvement in the activity of the cooperative and in which: (i) more than one type of member is represented in the governance structure of the cooperative; and (ii) no type of member has a dominant position through a majority of votes in the governing body or an exclusive veto over decisions.

Source: (International Labour Organisation, 2018)

In the cases of cooperatives with members' interest different from those proposed in Table 1, they will be analysed case by case. Mutuals and non-cooperative enterprises (noted as "non-coop" in the rankings) are classified as such. Almost all non-cooperative enterprises are those controlled by cooperative(s) except one case of employee-ownership enterprise.

INDICATORS

The project collects primarily economic data, along with data, where possible, on work generated, calculated using the total head count at the balance sheet year-end date, but also taking into account the data of Full-time equivalents or average data of the employed for the year in case data on head count are not available.

Annual turnover data is collected for the all the entities. In the case of a cooperative group, the consolidated data is taken into account. If the consolidated data is not available, if possible the turnover of the entities that make up the group are considered, excluding the amount of value resulting from operations within the group, meaning operations among members of the group.

The present report refers to data from the year 2018. For all the economic data, the account closing date is 31 March, which means that data for accounts whose closing date occurs between 01/04/2018 and 31/03/2019 are considered as representing economic activity in year 2018.

Data is collected in the local currency and then converted into USD. The average monthly 2018 exchange rate was utilized. Note that the conversion to USD from Local currency unit (LCU) is impacted by the fluctuations from year to year. Economic data are reported in billion (1 billion = 1,000,000,000). The absolute values are rounded to the second decimal place and percentages are rounded to the nearest whole number.

RANKINGS

In the rankings tables, in addition to the Top 300 rankings, a list of the largest cooperatives in each individual sector is presented. The rankings presented are based on turnover data, defined as the income generated by the business activities conducted by a company, usually the sales of goods and services to customers. In the case of the Insurance sector, this is premium income. For the Financial Service sector, this is the sum of net interest income, net premiums and other operating income, such as deposit and payment service charges, lending fees and credit card service revenues, income from brokerage and investment fund services, management and custodial service fees, foreign exchange income as well as other income. However, this value was used solely for the Financial Service ranking. In the Top 300 ranking, to achieve a more homogeneous comparison, the sum of interest income, non-interest income (income from banking services and sources other than interest-bearing assets) and premium income (if the organization also provides insurance services) was utilized for financial service organisations. This methodology creates the most homogeneity possible among data sources but note that there could be variations among countries and existing rankings regarding calculations and values used. When available, the number of employees is also listed.

In addition to rankings based on turnover, a Top 300 ranking based on the ratio of turnover over gross domestic prod-

uct (GDP) per capita is also presented. The purpose of this ranking is to neutralize the differences between the different countries due to differences in purchasing power and therefore the different cost of living that differentiates the individual countries: this allows a greater comparison of turnover. Some of the economic activities described above are grouped into sectors for the sector rankings: fishing is included in the agriculture and food industries sector, industry and utilities are grouped together, as are housing and other services.

DATA SOURCES

Data is collected through online research and consultation of financial statements and annual reports integrated with data-

sets developed at the national/regional level by representative associations of cooperatives and mutual societies and other private databases that gather personal and economic data about cooperative organisations from across the world. A questionnaire directed at the largest cooperatives was also utilized. Also with regard to the employment data, the working group has used various sources, online research, the questionnaire completed by the organization, data collected from lists at the national level and data collected in databases.

The direct involvement of federations and cooperatives is essential to ensuring good coverage in different areas of the world. For this reason, ICA promotes the creation of national monitors which, following the methodology of the international project, collect data on the largest cooperatives active in the country.

SECTOR RANKINGS

The following pages present the World Cooperative Monitor rankings by sector of activity. The results presented in the rankings are to be considered exploratory, not exhaustive. The methodology found on page 48 provides details concerning the data collection and analysis; however, some key points to keep in mind regarding the rankings include:

- If an organisation performs more than one activity, it is categorized in the sector representing its primary activity. Organizations are classified by economic activity, in some cases multiple economic activities have been combined into a sector.
- Comparisons among cooperatives in different sectors should be made with due caution, keeping in mind that varying economic indicators have been used for different types of organisations (banking income for banks, premium income for insurance cooperatives and mutuals, and turnover for other cooperatives).
- The rankings in this edition are based on data from 2018. To create the Top 300 and sector rankings based on U.S. Dollars (USD) the 2018 average exchange rate was utilized. Note that the conversion to USD from Local currency unit (LCU) is impacted by the fluctuations from year to year.

AGRICULTURE
AND FOOD
INDUSTRIES

This section includes all cooperatives that operate along the entire agricultural value chain, starting from the cultivation of agricultural products and livestock farming to the industrial processing of agricultural products and animals. This sector includes both agricultural producers' cooperatives and consortia of cooperatives (or similar arrangements) that carry out the processing and marketing of agricultural goods for their members. Organizations in the fishing sector are included. Agricultural cooperatives exist in almost every country around the world. They are very well represented in both developed and emerging economies and contribute to food security and poverty reduction in different areas of the world. They help farmers increase their returns and income by pooling their resources to support collective arrangements and economic empowerment.

From this sector, there are **106**
in the **Top 300** based on turnover
and **98** in the **Top 300** turnover

*Turnover includes subsidiaries and joint ventures

INDUSTRY AND UTILITIES

This section includes cooperatives operating in industrial sectors with the exception of the food industry as well as those whose economic activity deals with utilities. It includes worker cooperatives in the construction sector and users' cooperatives in the utilities sector, that is, cooperatives that are active in the management of infrastructure for a public service, such as electricity, natural gas, and water. Energy and other public services are sectors in which cooperatives are strongly motivated by ethical-cultural considerations and innovation. Often, they are committed to "green" energy and employ a more sustainable and responsible model of development, while providing local communities with the power to intervene directly in their own futures.

From this sector, there are **10**

WHOLESALE AND RETAIL TRADE

This section includes retailers' cooperatives formed to purchase and supply goods and services at competitive conditions in the interest of their members (which are classified as producer cooperatives in the cooperative typology) and consumer cooperatives operating in wholesale and retail activities (which are classified as consumer/user cooperatives in the cooperative typology). As is the case with cooperatives in general, the aim of cooperatives in this sector is not to maximize profits, but to be of use to their members and defend their interests. The goals of cooperatives include fostering sustainable development of local communities, promoting environmental concerns and ensuring the health and safety of consumers. With strength in numbers, cooperatives are able to further these aims through their ability to purchase and supply goods and services at competitive conditions in the interest of their members.

INSURANCE

This section focuses on mutual organisations and cooperatives owned and democratically controlled by their insured customers. Insurance cooperatives and mutuals focus on the long-term needs of their customers and on delivering high quality products at fair prices. According to the International Cooperative and Mutual Insurance Federation (ICMIF), mutual or cooperative insurers serve more than 900 million people worldwide. Their contribution is crucial within the social protection system, enabling members to obtain insurance policies at more favourable conditions than those available on the open market.

FINANCIAL SERVICE

This section refers to cooperative banks and credit unions providing banking and financial intermediation services, democratically controlled by member customers (borrowers and depositors). In the financial service sector, cooperatives play a central role in supporting economic development. Even during the recent economic crisis, cooperatives have remained more stable than other banks, continuing to provide trustworthy financial support for their members.

**EDUCATION,
HEALTH
AND SOCIAL WORK**

This section includes cooperatives that manage educational, health or social services. These may include consumer (user), producer (provider) and multistakeholder social and health cooperatives that seek to provide high-quality, cost-effective community health care and social services. The contributions of health and social care cooperatives range from medical intervention to the prevention of disease and the improvement of general health outcomes and collective well-being. The impact of these organisations is all the more important given the increasing demands on welfare systems around the world due in part to cuts in public funding and an aging population.

**OTHER
SERVICES**

This section covers all cooperatives that provide services other than those included in education, health and social work, including housing, cooperative business services, communications and transportation. The cooperatives in this sector show the variety of sectors of activity in which cooperatives may operate as well as the potential areas for further development of service-oriented cooperatives.

From this sector, there are **3**
in the **Top 300** based on turnover
and **6** in the **Top 300** turnover
over GDP per capita

PROMOTERS

International Cooperative Alliance (ICA)

www.ica.coop

The International Cooperative Alliance is an independent, non-governmental association which unites, represents and serves cooperatives worldwide. Founded in 1895, the ICA has member organisations in 100 countries active in all sectors of the economy. Together these cooperatives represent nearly one billion individuals worldwide.

European Research Institute on Cooperative and Social Enterprise (Euricse)

www.euricse.eu

The mission of the European Research Institute on Cooperative and Social Enterprises is to promote knowledge development and innovation for the field of cooperatives, social enterprises and other non-profit organisations engaged in the production of goods and services. The Institute aims to deepen the understanding of these types of organisations and their impact on economic and social development, furthering their growth and assisting them to work more effectively. Through activities directed toward and in partnership with both the scholarly community and practitioners, including primarily theoretical and applied research and training, we address issues of national and international interest to this sector, favouring openness and collaboration.

ORGANISATIONAL PARTNERS

Made possible by the support of our organisational partners

Banco Credicoop

It was established in 1979 through the merger of 44 Argentine credit unions. This merger was motivated largely by the adverse effect of the Financial Entities Law of 1977 had on this sector. Today, Banco Credicoop is Argentina's eleventh-largest bank by total assets and ninth largest by deposits (US\$2.8 billion); Nearly all of this is accounted for by its over 670,000 members, and Credicoop maintains 244 branches. It is also a lender in a country where domestic credit is difficult to access, holding a net loan portfolio of US\$1.7 billion (3.5% of the domestic total). Loans to small and medium businesses accounted for 70% of this, and the credit union holds 5% of the nation's domestic loans to this sector.

Buldana Urban Cooperative Credit Society

It was founded on 15 August 1986. It has a size of 1.1-billion-dollar business with more than half a million (700,000) membership. The area of operation is mainly in central and western India in four states of India. The society has 451 branches and 7000 employee and 300 warehouses. Business activities are mainly in warehouse loan business, gold loan business, industrial finance, infrastructure finance business, housing loan and vehicle loans, individual loans and educational loans.

Buldana Urban
Co-op. Credit Society Ltd. Buldana

Cooperativa Obrera

Founded in Bahía Blanca in the year 1920 when a group of 173 residents of Bahía Blanca decided to join to form a cooperative bakery that would ensure the right price, the exact weight and quality of bread, such a vital food. In 1932 its first cooperative store was opened. Today it has 1.6 million associates and 5,000 workers. It is the second large consumer cooperative in Latin America. It has its own quality control laboratory. It also has own credit cards which facilitates access to credit to its members.

Fundación Espriu

Fundación Espriu represents a network of Spanish entities that follow the cooperative health model created by Dr Josep Espriu. It comprises two big corporate groups, Asisa and Assistència, both headed and owned by cooperatives and leaders in the healthcare and insurance sectors. It includes insurance firms, hospitals and medical centres, IT companies, research laboratories, home emergency services companies and an assisted reproductive centre. Espriu's network provides quality health services to more than 2,6 million people in Spain and creates more than 6,200 direct jobs.

Indian Farmers Fertiliser Cooperative Limited (IFFCO)

Indian Farmers Fertiliser Cooperative Limited (IFFCO) is one of India’s biggest cooperative societies, and is wholly owned by Indian Cooperatives. Founded in 1967 with just 57 cooperatives, they are today an amalgamation of over 36,000 Indian Cooperatives with diversified business interests ranging from General Insurance to Rural Telecom in addition to their core business of manufacturing and selling fertilizers. With its vast marketing network IFFCO reaches more than 5.5 million farmers in India.

International Health Cooperative Organisation IHCO

IHCO is an international organisation founded in 1996 that brings together healthcare cooperatives from 14 countries. As a sector of the ICA, it is made up of cooperative businesses active in primary and specialised healthcare, hospitals’ management, health insurance, socio-healthcare, promotion, health literacy and pharmacy distribution. IHCO activity is addressed to showcase cooperatives as an alternative private actor who combines economic goals with social values; to highlight the global scale of the cooperative business model in the health sector; and raise awareness about its added value as people-oriented companies.

The Kibbutz Movement

The Kibbutz (Hebrew word for “gathering”) Movement is the largest settlement movement in Israel. It was re-organized in 1999 as a merger between two Kibbutz organizations and includes 257 members (kibbutzim). The kibbutz is a multi-purpose cooperative, binding together community, housing, and production means. The majority of kibbutzim are rural communities, based on principles of joint ownership, equality and cooperation in production, consumption and education, providing mutual aid to their members.

Midcounties Coop

The Midcounties Co-operative is the largest independent consumer cooperative in the UK, with over 700,000 members. It operates a range of businesses in Food, Travel, Healthcare, Funeral, Childcare, Energy, Post Offices, Flexible Benefits and Telecoms. It was formed in 2005, by the merger of the Oxford, Swindon and Gloucester Co-operative Society and the West Midlands Co-operative Society. The Midcounties Co-operative generates annual gross sales of over £1bn, has over 400 Trading Sites, 8,000 colleagues and over 700,000 members. It focuses on enabling their members to influence, connect and co-operate in joint activities that benefit their Society, their members and their communities.

Mondragon Corporation

MONDRAGON groups 98 cooperatives located mainly in the Basque Autonomous Region of Spain, and in their majority SMEs. It is the largest business group in the Basque Autonomous Region and the tenth in Spain. Its origins go back to 1956, when the first industrial worker cooperative was established in Mondragon, then a very small Basque town. It is a cross-sectoral group organized into four major areas: industry, distribution, finance and knowledge. Its mission combines the basic objectives of a business organization competing in international markets with the use of democratic and participatory governance, job creation, human and professional promotion of its workers and commitment to social and economic development of its territory.

National Agricultural Cooperative Federation (NACF)

NACF was borne out of the integration of the former agricultural cooperatives and the Agricultural Bank in 1961. Since then, NACF has played a crucial role not only in improving the conditions of farmers economically, socially and culturally, but also in contributing to the balanced development of the Korean economy. NACF and its member cooperatives are engaged in diversified business activities and support services to meet the need of member farmers and other clients. They can be grouped into three broad categories: banking sector, non-banking sector (commercial business), and support service sector. They also handle the farm credit guarantee service for the government.

OCB System

Co-operatives in Brazil number 6.6 thousand with 11 million members and they provide 320 thousand direct jobs. As a differentiated business model, Brazilian co-operatives rely on the permanent support of OCB System to defend and promote their interests and rights. The system is composed of three institutions working together. The Brazilian Cooperatives Organization (OCB) is the representative entity, acting to promote the efficiency and economic and social effectiveness of co-operatives – either in Brazil or overseas. The National Service of Cooperative Learning (Sescoop) promotes actions, courses and programs for the management and social development of the co-operatives. Finally, the Brazilian National Confederation of Cooperatives (CNCoop) provides union representation of the economic category interests in the co-operativist sector with public and private agencies.

Rabobank

Rabobank Group is a Dutch cooperative banking group born from small agricultural cooperative banks in the late 19th century. Today Rabobank operates in 39 countries and employs over 40,000 people worldwide. Rabobank Group is comprised of Rabobank, local Rabobanks, and its internationally based subsidiaries. Conditioned by its cooperative roots, the nature of Rabobank Group is characterised by strong mutual relationships. Rabobank is one of the Netherlands' largest cooperatives with nearly two million members.

S-Group

S Group is a Finnish network of consumer cooperatives operating in the retail and service sectors, mainly in Finland but also in Estonia and in Russia. S Group comprises 19 regional cooperatives and SOK Corporation along with its subsidiaries. SOK Corporation was founded in 1904 and it's owned by the regional cooperatives. Regional cooperatives are owned by their cooperative members and they operate according to the cooperative principles. Today by turnover, S Group is the biggest cooperative group in Finland. S Group's key business areas are the supermarket trade, department stores, specialty stores, the hardware trade, service station store and fuel sales, and the travel industry and hospitality business. In addition, S-Bank offers banking services to cooperative members. Individual cooperatives conduct also automotive trade and services.

Sancor Seguros

The Sancor Seguros Group is a financial cooperative institution based in Sunchales, province of Santa Fe, Argentina. It was founded in 1945. The cooperative manages different specialized organizations, including: Sancor Seguros (insurer) Prevención ART Prevención Salud, Prevención Retiro, Alianza Inversora, CITES, Fundación Grupo Sancor Seguros and Banco del Sol. It opened subsidiaries in Uruguay in 2006, Paraguay in 2009 and Brazil in 2013.

Smart

Established in 1998 as non-profit association specialised in offering economic activity and contract management services, insurance services, legal and consulting services, information and training, co-workspaces, and mutual financial tools mainly to artists, Smart Belgium was converted into a cooperative in 2016 and has a French and Belgian management. More recently it has opened itself to freelancers of all sectors of activities. Smart Belgium has organised a process for converting itself into a multi- stakeholder cooperative (workers, clients, partners, service providers etc.). Smart has disseminated to another 8 European countries through similar cooperatives, with a total of 85,000 members.

UP Group

Founded in 1964 as a consumer cooperative, it became a worker cooperative in 1972. It designs and markets products and services that facilitate access to food, culture, recreation, education, home help, social assistance but also accompanies companies in the management of their professional expenses or in the animation of stimulation and fidelity devices. It offers a wide range of titles and services for companies, works councils, communities and individuals. The group is also present in the software solutions market for personal services structures. Present in 19 countries on all continents, the Up group works for more than 24.5 million customers and is the world number three in lunch vouchers.

Dot coop

Unite and empower cooperatives online – our mission, our singular goal that drives everything we do.

At DotCoop, we unite the cooperative community through a shared online identity and platform where cooperative organizations can participate, inform, educate, and pioneer a path for others to join and support the cooperative movement.

We empower cooperatives to participate and thrive in the digital economy. Our resources include the provisioning of .coop domain names, the .coop Global Directory, educational support programs, and the Cooperative Marque.

Every cooperative that uses a .coop domain name as the primary address for their website elevates their cooperative identity, principles, and purpose. It unites the cooperative movement online with a shared identity. It transforms an organization's value from a lone contributor to an active participant of a global online network.

DotCoop is jointly owned by the International Cooperative Alliance (ICA) and the National Cooperative Business Association (NCBA CLUSA), two non-profit organizations with a mission to develop the global cooperative movement.
